

Technology Day

Focus On

Windows & Doors

August 12th, 2026

Biesse Material Hub - Sydney > Australia

Official Partner

Focusing on Windows and Doors manufacturing

Window and door manufacturing demands efficiency, precision and flexibility with the ability to adapt to evolving market trends.

Join us for a Technology Day showcasing how 5-axis CNC technology, precision tooling and automated sanding can transform the production of solid timber windows and doors.

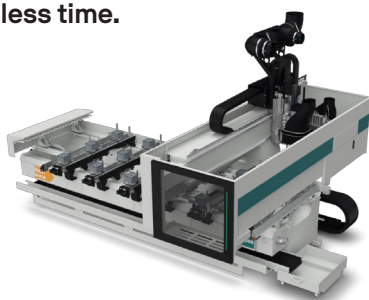

Through live demonstrations, you'll see how accurate joints and profiles can be produced quickly, safely and with minimal setup time using premium **Leitz Tooling Systems**.

We'll then take the process one step further, demonstrating how automated sanding delivers a consistent, high-quality finish straight off the machine using **Workmate Abrasives**. Eliminate manual sanding, reduce rework, save valuable production time and achieve a finish that's ready for the next stage of manufacturing.

A practical technology day focused on increasing productivity, improving finish quality and delivering more finished parts in less time.
